

# Early Action Rainfall (EAR) Watch

Vanuatu Meteorology & Geo-hazards Department

PMB 9054, Port Vila, Vanuatu

Phone: (+678) 23866, Fax: (+678) 22310

Email: climate@meteo.gov.vu

Issued: May 2022

The Early Action Rainfall Watch provides a summary of recent rainfall patterns, particularly the status of the rainfall and the outlook for the coming months. This product is issued on a monthly basis. For more details and climate information, contact the Vanuatu Meteorology and Geo-hazards Department.

## Summary

**Rainfall Status:** The status shows a meteorological drought over Torba while normal or wetter than rainfall was recorded elsewhere in June. Very wet rainfall status was recorded for Bauerfield, Port Vila and White grass in the pas 3,6 and 12 months, however sola was in a drought watch together with drought warning in the past 3 and 12 months, with normal or wetter than normal rainfall elsewhere.

### Rainfall Outlook:

Climate models forecasting the monthly rainfall outlook for June and a seasonal outlook from June to August to be Above normal (Alert 3), for all regions of Vanuatu extending from northern to southern provinces.

**The El Niño Southern Oscillation (ENSO) Status is still in La Nina.** La Nina event still continues in the tropical pacific with little change in strength in the past few weeks.

## Rainfall Status

The table below provides information on rainfall status for Vanuatu. The status refers to rainfall received over the last 1, 3, 6 and 12 months, highlighting very dry or very wet periods relative to normal.

		Rainfall Status			
Period		12-month period	6-month period	3-month period	1-month period
Months		May 2021 — April 2022	November 2021 — April 2022	February 2022 — April 2022	April 2022
Northern Region	Sola (1971—2021)	Yellow		Orange	Red
	Pekoa (1971—2021)	Grey		Yellow	
	Lamap (1961—2021)				
Southern Region	Bauerfield (1972—2021)	Blue	Blue	Blue	
	Port Vila (1953—2021)	Grey		Blue	
	White grass (1972—2021)	Blue	Blue	Blue	
	Aneityum (1952—2021)				

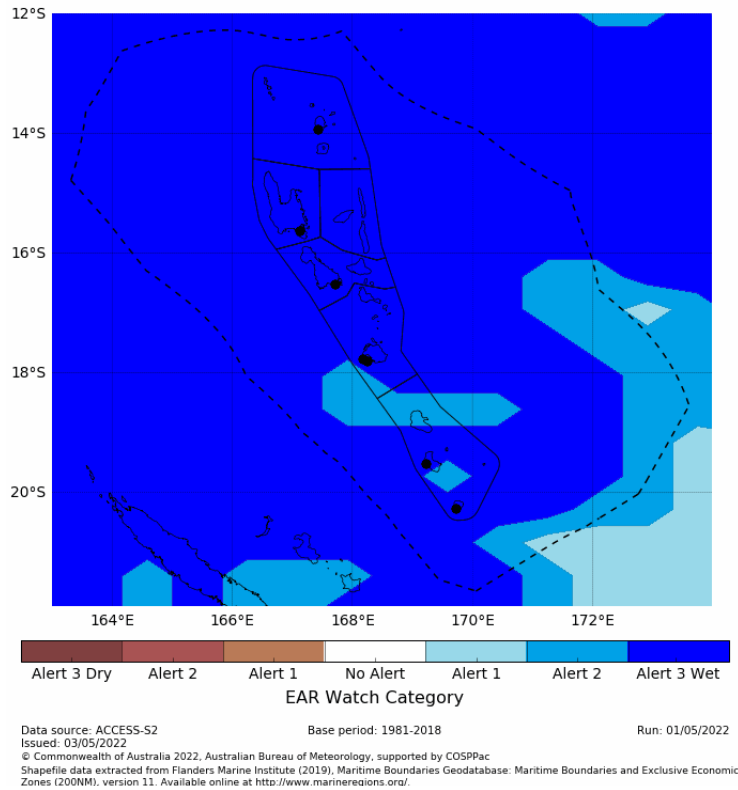

Rainfall Status Key	<b>Meteorological Drought</b> Rainfall has been extremely lower than normal	<b>Drought Warning</b> Rainfall has been very much lower than normal	<b>Drought Watch</b> Rainfall has been slightly lower than normal	<b>Status not available</b> Data not available	<b>Normal or wetter than normal</b>	<b>Very Wet</b> Rainfall has been extremely higher than normal
---------------------	--	---	--	---	-------------------------------------	---

## Rainfall Outlook

The graph below provides information on rainfall outlook for Vanuatu. The outlook refers to rainfall predicted for the next 1 to 3 months. If Alert 3 Wet (blue shade) falls over an area, this indicates there is a high chance for wetter than average conditions. If Alert 1 Wet falls over an area, this indicates there is only a slight chance to experience wetter than average conditions. Same principle applies to drier than average conditions (brown shades).

Refer to Vanuatu Climate Update for more details.

EAR Watch Categorical forecast for June 2022

EAR Watch Categorical forecast for June to August 2022

### Climate Change Drought Projections to 2090

For the whole of Vanuatu, the overall amount of time spent in drought is expected to stay the same or slightly decrease in the future. Droughts are expected to occur less often. Drought length is not expected to change. Overall, there is low confidence ('trust') in drought projections. However, droughts will continue to occur including serious droughts and people still need to prepare for these events.

## Time periods and impacts

The following table provides examples of impacts that have been associated with drought at the 1, 3, 6 and 12 month periods. For further information and details refer to the ENSO handbook and contact the relevant government departments.

Sector/ Department	12-month period	6-month period	3-month period	1-month period
<b>Water</b>	Large water sources e.g. large rivers, lakes.  Groundwater supply systems affected, water level drops, hand dug wells dry up and groundwater sources become saline.	Dams, bores, industrial tanks, wet lands, medium rivers.  Rainwater catchments will be heavily affected including large rainwater tanks, surface water affected with reduced water level. Water quantity and water quality is further reduced.	Small to medium water tanks, small rivers.  Rainwater catchments will be affected & water level reduced.	Water quality in wells and tanks reduced in small islands and west side of large islands.
<b>Agriculture and freshwater fisheries</b>	Large fruit trees, (e.g. coconuts, coffee, mango, guava, orange, mandarin), wild yam.	Rice, sugarcane, banana, wheat, root crops affected e.g., mature yam, Fiji taro, manioc.	Banana, cassava, new yam, water taro, English potato, kumala, vanilla, young kava, apple banana, aquaculture.	Small vegetables (e.g. tomato, lettuce, Chinese cabbage) and island cabbage on small islands and drier side of larger islands (W to N).  Pasture will also be affected.
<b>Livestock</b>		Loss of large livestock (pigs, goats and cattle), farmed and wild freshwater fish and prawns.	Loss of small livestock (poultry).	
<b>Forestry</b>	Bushfire, insect pests and Diseases.	Loss large trees (due to increase spread and intensity of insect attacks)  Loss of forest canopy affects quality and quantity of water, bushfire.	Loss of small trees (spread of insects and diseases attacks), sandalwood seedlings, bushfires.	
<b>Environment</b>	Loss of habitat, migration of endemics/species, degradation of landscape quality, loss of biodiversity/vegetation (extinction), introduction of alien/invasive species, secondary impacts, e.g., resettlements (2015)	Streams/lakes & any water bodies affected, introduction of alien/invasive species, landslides on new volcanic slopes.		Grassland
<b>Health</b>	Health - further deterioration in human health (e.g. cases of cholera appear, severe unbalance diet leading to death, cough & stunting, mental stress, diarrhoea, increased cases of skin diseases.  Education - school close.  Socio-economic - less income/ less production of local produces, bush fires destroying building, reduced river transport on large rivers, women migrating to get water.  Increased chances of traditional houses burn down, reduced building materials.	Health - Increase in migration due to water and food shortages. Deterioration in adult human health (poor lactation, malnutrition, cases of typhoid, dengue, malaria, increase in skin, respiratory and eye diseases).  Education - Affect education and children attendance, increase in social disruptions (e.g. reduced school hours) unbalance diet (relying on rice, tin fish & noodles), mental stress, diarrhoea, increased cases of skin diseases.  Socio-economic - Increase in social disruptions (e.g. financial stress, assets being sold, crime). Social obligations being postponed. less income/less production of local produces, bush fires destroying building.	Health - Deterioration in young and old human health (malnutrition, poor lactation, dehydration, skin disease and diarrhoea cases).  Education - affects schools for children due to reduced water supply e.g. schools close half day.  Socio-economic - Unbalance diet/ less vegetables, additional labor on children & women, traveling distance to collect water, increase in psychological/mental stress, stealing.  Food prices increase, reduced income.  Some negative social disruption but also some positive impacts e.g. formation of women's networks.	Increase in gender based violence, increase non-communicable diseases.  Disable persons due to higher water needs, increase discrimination.
<b>Tourism</b> Accommodation: Toilet/Shower, Swimming Pool, Restaurants, Flower/ garden, Water, Activities, Snorkeling, Kayaking, Water, Picnic, Waterfall	Airline & transport industry affected, agriculture and fishermen activities affected as well as duty free shops.	Drop in visitor numbers, reducing employment, reduce in income for business owners. Increase water temperature  affecting snorkeling, reduce in the water level affect visitors to river activities, drier river level, reduced in income, reduced number of visitations.	Poor quantity and quality supply of water, inconsistency supply, affect availability of  vegetables and others for hotels, flowers and plans drying up.	
<b>Infrastructure</b>	Road works thrive on drought as rainfall disturbs & damages roads & infrastructure (bridges & culverts)			
<b>Energy</b>	Infrastructure that depends on water in hydro-power, during drought, river/water level drops, affects generation of electricity. Sola energy companies thrive on droughts.
